2. Specific questions:

No.			II. Managing Company	III. Business Unit	IV. Shareholders	V. Country	VI. Operation	1. "Tailings Facility" Name/identifier	2. Location	3. Ownership		5. Date of initial operation	6. Is the Dam currently operated or closed as per currently approved design?
Anglo	America	n Managed Operations											
43		Anglo American	Anglo American	Nickel	Anglo American	Brazil	Codemin		Latitude: 14°09′13′′S Longitude: 48°20′36′′W	Owned and Operated	Active.	1990	Yes

7. Raising method	8. Current Maximum Height (m)	9. Current Tailings Storage Impoundment Volume (m³)		Independent Expert Review	12. Do you have full and complete relevant engineering records including design, construction, operation, maintenance and/or closure.	13. What is your hazard categorisation of this facility, based on consequence of failure?	classification system?	notable stability concerns, as identified	Or do you have external
Other, See Q20 for more information	5.3	43,445	~43,000 (see Q. 20)	2018, See Q20 for more information	Yes.	II OW	National Dams Security Policy: law № 12.334/2010.	No.	Yes. Internal geologist- geotechnical expert. External support from a geotechnical consultant when necessary.

17. Has a formal analysis of the downstream impact on communities, ecosystems and critical infrastructure in the event of catastrophic failure been undertaken and to reflect final conditions? If so, when did this assessment take place?	plan in place for this dam, and b) does it include long term	tailings facilities against the impact of	20. Any other relevant information and supporting documentation. Please state if you have omitted any other exposure to tailings facilities through any joint ventures you may have.
No. See Q20 for additional information	Yes. See Q. 20.	Yes, See Q20 for additional information	Q6: The volume remains approximately constant due to the cyclical production process. The material is reused, so there is no gain or loss of volume. Q7: Not applicable. Q11: Technical memo by external engineering firm, Anglo American internal specialits also visited the site and facilities in 2017. Q17: There is no community downstream of the facility and the hazard category is low. Q18: There is a closure plan for the industrial plant, which includes the reservoirs. The dust from the pond will be processed. Q19: Not performed as yet, but Anglo American long term Sustainable Mining Plan requires this to be done for all managed sites within the next 2 years.
